	may increase the risk of scleroderma (thickening of the connective tissue) and			
	kidney disease (increased prevalence of renal abnormalities and end stage – renal			
	disease – glomerulonephritis).			
	Clinker ash also contains environmental toxins in significant amounts, including			
	arsenic (43.4 ppm); barium (806 ppm); beryllium (5 ppm); boron (311 ppm);			
	cadmium(3.4 ppm); chromium (136 ppm); chromium VI (90 ppm); cobalt (35.9

	vanadium (252 ppm); and zinc (178 ppm).			
	<b>Compost (mulch)</b> is made from organic materials, including composted pine bark,			
	and contains living micro-organisms, including bacteria, fungi, and protozoa. May			
	also contain mineral and fertiliser additives. Inhalation of dust and/or liquid mists			
	may irritate, inflame or sensitise the nose, throat and lungs resulting in illnesses			
	ranging from hay fever or asthma to pneumonia (eg Legionnaire's disease) I or			
	pneumonia-like illnesses. Direct contact with this material or its			
	dust and/or liquid mists (bio-aerosols) may cause skin irritation			
	(dermatitis), and skin or eye infection or irritation.			
Routes of Exposure	Inhalation, ingestion, eye and skin			
Acute Health Effects	Inhalation: abdominal discomfort and increase the risk of gastro-intestinal infections.			
	May cause irritation resulting in redness and watering or even eye infection.			
Chronic Health Effects	Repeated inhalation of dust (bio-aerosols) from these products may result in			
	respiratory irritation, inflammation or sensitisation resulting in illnesses ranging			
	from hay fever and asthma to pneumonia (eg Legionnaire's disease) and			
	pneumonia-like illnesses.			
	It may also cause scarring of the lung (silicosis), lung cancer, chronic bronchitis			
	and increase the risk of scleroderma (thickening of the connective tissue) and			
	kidney disease.			
	All people working with these and other landscaping and horticultural products
